

Full CLI reference (SSH in first)

```
ssh -i ~/Downloads/acb_processor.pem ubuntu@98.86.63.69
```

Service auto-start (systemd)

```
sudo systemctl status forensic-audio # is it enabled/running
```

```
sudo systemctl start forensic-audio # start (if stopped)
```

```
sudo systemctl stop forensic-audio # stop all containers
```

```
sudo systemctl restart forensic-audio # restart everything
```

```
sudo systemctl enable forensic-audio # enable auto-start on boot
```

```
sudo systemctl disable forensic-audio # disable auto-start
```

Docker containers

```
cd /app
```

```
docker ps # running containers
```

```
docker ps -a # all including stopped
```

```
docker compose up -d # start all
```

```
docker compose down # stop all
```

```
docker compose restart # restart all
```

```
docker compose restart worker-gpu # restart specific service
```

```
docker compose logs -f worker-gpu # live logs GPU worker
```

```
docker compose logs -f api # live logs API
```

```
docker compose logs --tail=50 api # last 50 lines
```

```
docker stats # live CPU/RAM/GPU usage
```

Deploy latest code from git

```
cd /app
```

```
git pull origin IndicConformer # pull latest
```

```
docker compose build --no-cache # rebuild images
```

```
docker compose down && docker compose up -d # redeploy
```

Queue / jobs

```
docker compose exec redis redis-cli FLUSHDB # clear all queued jobs
```

```
docker compose exec redis redis-cli DBSIZE # jobs in queue
```

```
curl -s http://localhost:5555 # Flower dashboard (Celery monitor)
```

API test

Health check

```
curl -s -o /dev/null -w '%{http_code}'
```

```
-H 'X-API-Key: f379241418da1092837aaa6b7138e850e4b99b1b2f88ba90d527e6a0b4b4a600'
```

```
http://localhost/cases
```

Check job status

```
curl -s -H 'X-API-Key: f379241418da1092837aaa6b7138e850e4b99b1b2f88ba90d527e6a0b4b4a600'  
http://localhost/jobs/<JOB_ID>
```

Get result

```
curl -s -H 'X-API-Key: f379241418da1092837aaa6b7138e850e4b99b1b2f88ba90d527e6a0b4b4a600'  
http://localhost/jobs/<JOB_ID>/result
```

Disk / GPU

df -h # disk usage

nvidia-smi # GPU VRAM usage

docker system df # docker disk usage

docker system prune -af --volumes # nuke all unused images/volumes

Database (Postgres)

docker compose exec postgres psql -U pipeline -d forensic # psql shell

inside psql:

\dt # list tables

```
SELECT id, status, stage FROM jobs ORDER BY created_at DESC LIMIT 10;
```

\q # quit
